

Attenex[®] Patterns[®] E-Discovery Software

Puts You in Position to Make the
Best Decision on Any Matter

A complex and expensive process, electronic discovery involves dozens of steps, massive amounts of data in multiple repositories and a vast line up of stakeholders — corporate legal departments, IT teams, outside counsel and often service providers.

Fortune 500 corporations and their law firms choose Attenex Patterns to manage their e-discovery process based on its unparalleled flexibility to meet the needs of a variety of discovery requests.

Attenex® Patterns® E-Discovery Software provides corporate legal and IT teams with a smarter way to optimize the processing, organizing, analysis, review and production of electronically stored information (ESI). Unlike search-based offerings, Attenex Patterns leverages deep domain expertise to provide leading-edge review and flexible discovery project management capabilities. Built to address a wide variety of matter types, Attenex Patterns puts your team in the best position to make the best decision in response to

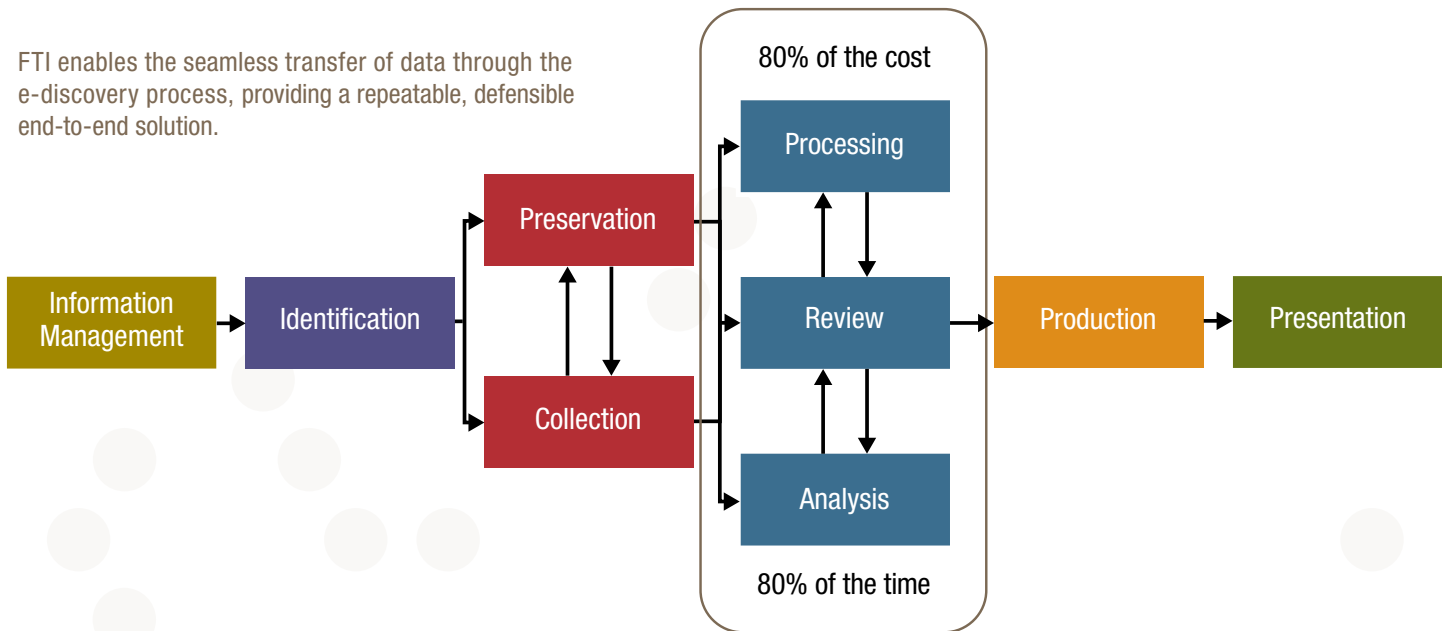

investigative, legal or compliance requests – at any stage of the project.

Attenex Patterns helps corporations and their law firms find relevant data fast. Our patented software enables users to more quickly and accurately navigate document collections to identify information-rich documents. Case strategies can be built faster, reducing the time, risk and expense associated with the most costly component of the e-discovery process – document review.

Establish a Complete, Defensible E-Discovery Process

Attenex Patterns provides the performance, reliability and defensibility required to successfully deliver relevant information during time sensitive and complex discovery projects ranging from a single email inbox to multi-terabyte matters.

FTI enables the seamless transfer of data through the e-discovery process, providing a repeatable, defensible end-to-end solution.

Reduce Risk & Complexity. Standardize e-discovery procedures with a single system of record for processing, organizing, analyzing, reviewing and producing ESI.

Create Project Transparency. Attenex Patterns provides extensive project management capabilities enabling stakeholders to easily understand project status at any stage of the process.

Choose a Deployment Method. Whether on-premise, on-demand through an Attenex Advantage™ service provider, or a hybrid of the two, Attenex Patterns provides flexible deployment options that can be customized to the needs of any environment.

Cut Discovery Costs. Shrink data sets by eliminating duplicates and non-relevant data; accelerate document review using our leading-edge and patented software.

Automate Workflow. The Attenex Patterns Software Development Kit (SDK) enables comprehensive, robust automation to create optimized, repeatable workflows for IT teams — providing consistency and defensibility into each data-related task.

Develop Case Strategy Earlier. Extract and analyze important information faster to make informed decisions on case strategy earlier in the process.

Attenex Patterns E-Discovery Software

Attenex Patterns software is the result of over seven years of research and close collaboration with attorneys and e-discovery project teams. The software was developed with a deep understanding of user requirements and domain expertise specific to the challenges of e-discovery and document review. Attenex Patterns is proven to drive efficiency throughout the e-discovery process.

Attenex® Patterns® Document Mapper™

Attenex Patterns Document Mapper is the choice of legal and compliance teams that need to quickly and accurately identify relevant information from electronic document collections of any size. An unparalleled visual interface increases review productivity with a multi-dimensional look at a collection's main concepts and themes. Reviewers can quickly and accurately identify, analyze, review, and categorize electronic information in a single application. Our proven productivity not only reduces the expense of document review, the most costly component of the e-discovery process, but also enables a more accurate and confident review.

Attenex® Patterns® Workbench™

Attenex Patterns Workbench is enterprise-class data and project management software designed to streamline the process for responding to e-discovery requests. More than a culling tool or appliance, Workbench offers unprecedented flexibility to build and manage case strategy while empowering Legal IT teams to administer repeatable processes from processing to production.

“Attenex Patterns enabled our team to review, on average, 2,500 documents per person, per day. No other product on the market allows us to review data this quickly. Plus, with the project management tools within Attenex Patterns, we were able to review at this phenomenally fast rate and ensure accuracy for our customers. This not only helps dramatically reduce the cost of e-discovery, it allows our customers to focus on what’s really important — case strategy.”
